Заголовок	THEORETICAL AND METHODOLOGICAL APPROACHES TO EVALUATING FACTORS OF DEVELOPMENT OF SMALL BUSINESS
Аннотация	This article discusses theoretical and methodological approaches to assessing the development factors of small business. It is noted that in foreign countries, researchers are actively considering the problem of small business development in order to identify what factors and how exactly small medium enterprises (SMEs) influence development and what measures the state needs to take to develop policies that would stimulate the development and growth of small enterprises. The article reflects the problems facing small enterprises in the context of globalization. Estimates of the results of small business parameters are also considered.

Заголовок	PSYCHOLOGICAL AND PEDAGOGICAL CONDITIONS FOR THE PREVENTION OF AGGRESSIVE BEHAVIOR OF ADOLESCENTS BROUGHT UP IN A FOSTER FAMILY

Аннотация	<p>The problem considered by the author of the article is currently relevant for a number of reasons. Changes in the social, political and economic spheres of society have led to significant changes in the consciousness and behavior of citizens, an increase in psychological tension among the poor. Adolescents left without parental care as a result of deprivation of their parental rights, placed in a foster family, are at risk: past asocial experience, the lack of positive reinforcements on the part of adults makes children to look for ways to assert ourselves. Often, as such a method, adolescents use aggression, which is usually directed at weaker peers. At the same time, the psychological and pedagogical incompetence of adults further exacerbates the situation. The author of the article, based on an analysis of scientific research of the problem, as well as personal observations and her own experience in the commission for minors and protecting their rights, suggests ways to reduce the aggressive manifestations in adolescents from foster families.</p>

Заголовок	PSYCHOLOGICAL FUNCTION OF LANDSCAPE IN THE BOOK OF ESSAYS BY A. P. CHEKHOV «SAKHALIN ISLAND»

Аннотация	The article considers the psychological function of landscape in the book of essays by A.P. Chekhovs Island of Sakhalin. The concept of psychologism is investigated and applied to the Chekhov text. It is noted that the authors storytellers inner world interacts dynamically with the new topos of Sakhalin nature, which were revealed to him on a journey, which receive their verbal description through the creative thinking of the author, painting either an artistic picture or a scientific and documentary description of the landscape. The author proves that the landscape in Sakhalin Island has a specific pictorial function, it is deeply psychological, plays an evaluative role and is a clear expression of the authors idea about the tragedy of Sakhalin life.

Заголовок	BRIGHTNESS AS A SIGNIFICANT COMPONENT VERB LEXICOSEMANTIC GROUP "FLUORESCENCE"

Аннотация

This paper introduces the phenomenon of light in the language on the basis of the insights on issues of definitions and contexts of verbs using. The lexically-semantic group FLUORESCENCE is taken for analysis. It is shown how cultural differences in the language are associated with the perception of the same physical phenomenon. The components of meaning and the basic verbs are provided at the lexical meanings of the verbs of the Russian and the English languages. The main components of the meaning are: the ability to emit light, the ability to reflect light, the intensity of radiation, the combination of light and brilliance, the unevenness of the feature, the continuity of the feature. The basic verbs reflect in their semantics the process of shining (the emission of light) and they necessarily have in their definitions the meaning emit light, be a source of light. Analysis of the definitions of verbs and the contexts of their use showed how verbs convey information about the nature and quality of light radiation. Particular attention is paid to the component brightness, radiation intensity. It is proved that bright radiation plays an important role in linguoculture and it is fixed in the values of most verbs. The component high radiation intensity is widely combined with other components of the value and weakly depends on the ability of the object to emit or reflect light. Information on the brightness of the fluorescence in the sentence is transmitted by the components of the meaning of the verb and adverbs. Brightness of light has a different quality depending on the light sources and circumstances. The perception of light differs in different languages, which is found in the analysis of the verbs of Russian and English. Even closely related verbs have differences in the distribution of components. In the English language a broader combination of the components of meaning is presented.

Заголовок	THE 19TH CENTURY ARABIC CHRESTOMATHIES BY A.V. BOLDYREV IN RUSSIA
Аннотация	The 19th century witnessed a new stage in the development of Russian Arabic studies by introducing the teaching of this oriental language into the curriculum of the higher school. At that period the issue of acute necessity of creation of various Arabic language teaching aids arose. Professor A.V. Boldyrev (17841842), who started teaching Arabic at the new Chair of Moscow University, compiled The Arabic Chrestomathy which was spread throughout Russia in its two publications (1824 and 1832). The author took into account all the achievements of the Arabic Science of that period in full, and the examined chrestomathies were distinguished by both continuity and originality.

Заголовок	STRUCTURAL MODELS OF VERB CONTAMINATED FORMATIONS
Аннотация	In the article, the author considers the study of structural types and structural models of contamination, which has both theoretical and practical significance, as it gives an opportunity to highlight the exact composition of the word and predict the ways in which the formation of new contaminated words will proceed. The manifestation of the principle of contamination based on the selection of types and models is explained by the author by studying stylistic verb contamination in French and the author notes that the number of structural models has been supplemented by the division of components of the contaminated word into the initial, final part and the first/second half of the word, as well as the full form of the word and its lexical basis.

Заголовок	APPROXIMATE SOLUTION OF THE STEFAN PROBLEM IN THE SOLIDIFICATION OF A METAL MELT DROPLET
Аннотация	<p>A mathematical model of the solidification process of a liquid metal droplet is considered, taking into account the mobility of the boundaries at which the phase transition is carried out (Stefan problem). Refinements to the algorithm of mathematical modeling, allowing to take into account the nonlinearity in the equation of unsteady thermal conductivity, are given. Using the developed numerical model, a study of heat transfer during solidification of leadcontaining aluminum melt droplets of different sizes in air and water was carried out. Based on the results of numerical experiments determined the effect of initial overheating of the melt droplet size and coefficient of velocity of crystallization of the pellets included in the wellknown approximate expression (law square root) linking the thickness of the solid crust with the duration of the solidification process.</p>
