Заголовок	THE CONCEPT OF PERSONAL INFORMATION SECURITY IN MODERN RUSSIAN SOCIETY
Аннотация	The article reveals the nature of identity in the post-industrial information-oriented society. The authors propose the development of the concept of cyber and psychological security of an individual under conditions of IT penetration to a society and education. It is proved that in the information-oriented society the conditions are created for self-determination, development of knowledge and self-realization of any individual. Socialization of the individual in the information-oriented society, communication processes make the life of the individual free, which creates problems for the legal provision of cyber security.

Заголовок	TRANSFORMATION OF VALUE AND MENTAL SPACE OF MINORS IN THE CONDITIONS OF ANOMIE

Аннотация	It is proved that the unfavorable geopolitical context, the change in the value-normative system of the emerging individualistic society reinforce the social disorientation of the personality of the adolescent. The study is aimed at studying the development of personality of minors in conditions of anomie. The article presents the results of an empirical study of juveniles prone to suicide. Juvenile prone to suicide, found a low level of reflection, the uncertainty of value consciousness, imperfect mechanisms of experience, imitative ways of life. It is proved that the prevention of juvenile suicide is associated with an increase in their subjectivity, which allows a teenager to overcome dependence on external conditions, to master reflection. The data obtained can be used in the development of social support programs for minors, as well as in scientific research on the prevention of suicide.

Заголовок	FEATURES OF INTERRELATION OF DIVISIONS OF THE AUTONOMIC NERVOUS SYSTEM OF YOUNG JUDOISTS WITH DIFFERENT TYPES OF NERVOUS REGULATION IN THE ANNUAL TRAINING CYCLE
Аннотация	The article considers the problem of the variability of the values of heart rate variability indicators at various stages of the annual training cycle. The predominance of an autonomous type of heart rate regulation was noted with a predominance of high values of the total spectrum and the high-wave part of the spectrum. A tendency towards the transition to the central regulation of the heart rhythm while maintaining the activation potential of the sympathetic department of the autonomic nervous system was revealed.

Заголовок

A NEW PARADIGM OF THE VALUE OF HUMAN DIGNITY IN THE ASPECT OF PHILOSOPHICAL SOCIO-ANTHROPOLOGICAL ISSUES

Аннотация

The article is devoted to the search for a new paradigm of the value of human dignity in the context of changes in technological civilization and global processes, accompanied by broad communicative links and national interests. Globalization as a phenomenon, on the one hand, is associated with a natural-historical objective process, a long process of anthroposociogenesis with the desire for a global community and interaction. On the other hand, globalization is associated with changes in the last decades of the XX-XXI centuries caused by the expansion of the world economic space. In this context, globalization has become the object of political and theoretical criticism as a violation of human dignity and national interests, as a process of expanding the power of world capital and increasing the exploitation of workers, manifestations of injustice that does not ensure a decent quality of life in the world community. At the same time, the global problems faced by humanity were posed by nature on the one hand, and by man made human activity and a complex system of closely interacting communicative links on the other. Global challenges call for the search for ways of human survival and relatively harmonious unification of mankind. In this regard, modern philosophy puts forward two global values for which man is responsible: the preservation of human life and humanity an anthropological value the preservation of the biosphere of the planet Earth an ecological value associated with human activities. Consequently, the new paradigm of the value of human dignity in the aspect of philosophical anthropology is characterized by reaching the transnational level in interethnic and international communication.

Заголовок	HAVE THE “WORLDVIEW LESSONS” OF THE THERMODYNAMICS OF THE XIX CENTURY BEEN LEARNED? (EXPERIENCE OF PHILOSOPHICAL REFLECTION ON THE CONNECTION BETWEEN IDEOLOGY AND THE SCIENTIFIC PICTURE OF THE WORLD)

Аннотация	<p>in the article, the thesis about the connection between science (including natural science) and ideology (the radical form of which is the famous formula of I. R. Prigozhin science is ideology in a sense) is concretized on the basis of the ideas of S. Carnot, R. Clausius, V. Thomson (Lord Kelvin), L. Boltzmann and other great physicists of the XIX century. It is shown that the lessons of classical thermodynamics were, firstly, the awareness of the irreversibility of most natural processes, which gave rise to the rejection of the revolutionary transformation of social and state structures (or at least caution in relation to them). Secondly, such a heuristic model for studying complex processes as the Carnot cycles was formulated, and its application to the economy helped to understand the extended reproduction cycles in the economy. At the same time, we substantiate the idea that neither Marxist, nor Social-Democratic, nor liberal ideologies have fully learned these worldview lessons.</p>

Заголовок	FEATURES OF REALIZATION OF TEXT-FORMING CATEGORIES IN THE TEXT OF A CULINARY RECIPE (BASED ON THE DIALECTS OF RUSSIAN GERMANS)
Аннотация	<p>This article is devoted to the problem of linguistic research of small-format texts, features of realization of their text-forming categories. The article aims to consider the text-forming categories of texts of culinary recipes of Russian Germans. The research is based on a field method (survey of respondents) and a comprehensive analysis of the texts of recipes. The research material was the texts of culinary recipes (in a mixed dialect: West-middle German and East-middle German) recorded orally via digital audio recording. In the graphic fixation of recipes used spelling, close to the norms of the literary German language. As a result of the research the following text categories were established: informativeness, divisibility, coherence and modality. The analysis of text-forming categories has shown that the realization of text-forming categories in the oral texts of recipes of Russian Germans has its own characteristics.</p>

EXPERIMENTAL STUDY OF INTONATION GROUPS OF THE MODERN CHECHEN LITERARY LANGUAGE

Аннотация

This paper is an experimental study of intonation groups of one of the Caucasian languages, the Chechen language, using the computer program Praat. The purpose of the article was to conduct the first experimental study of the intonation of the Chechen language using computer technologies. The analysis of spectrograms of intonation syntagms of the modern Chechen literary language is carried out. The obtained data can become the basis for further development of issues of Chechen linguistics and Nakh linguistics as a whole, can be used for creating educational programs and textbooks on the phonetics of the Chechen language at the Universities of the Chechen Republic.

Заголовок	FEATURES OF THE VERBALIZATION OF KINEME IN RUSSIAN
Аннотация	This article is devoted to the study of kinematic expressions of the Russian language, consideration of the relationship between the language manifestation of the kinemes and their meanings, and the determination of their structural and semantic properties. In the framework of our study, lexical and semantic features of these lexical units have been identified that distinguish them from other stable word combinations. It is revealed that the deep meaning of kinematic sayings is directly not related to its form and its semantics is transmitted using explicit and implicit qualifiers in a specific communicative context.
